ROLLER FLAKER - PROTOTYPE

The cereal flakes manufacturing process involves the use of a roller flaker. A suitable flaker is not available in the country. Recently there has been an increasing interest in the cereal flakes technology.

A prototype roller flaker has been designed and standardized at this institute to produce uniform cereal flakes. The handling capacity of this machine is 300 to 400 Kg/hr of paddy yielding 200 to 300 Kg of flakes per hour.
